Experiment 05: Working with k3d and Rancher

Create our cluster for this experiment. We'll be working with the Rancher configuration for k3d. Rancher Labs was purchased by Suse this year to continue to provide solutions for IoT and Edge usages for Kubernetes in cloud-native application development and modernization.

C:\k3d> **k3d cluster create k3d-rancher --api-port 6550 --servers 1 --agents 3 --port 443:443@loadbalancer --wait**

[36mINFO[0m[0000] Created network 'k3d-k3d-rancher'
[36mINFO[0m[0000] Created volume 'k3d-k3d-rancher-images'
[36mINFO[0m[0001] Creating node 'k3d-k3d-rancher-server-0'
[36mINFO[0m[0001] Creating node 'k3d-k3d-rancher-agent-0'
[36mINFO[0m[0001] Creating node 'k3d-k3d-rancher-agent-1'
[36mINFO[0m[0005] Creating node 'k3d-k3d-rancher-agent-2'
[36mINFO[0m[0005] Creating LoadBalancer 'k3d-k3d-rancher-serverlb'
[36mINFO[0m[0013] Cluster 'k3d-rancher' created successfully!
[36mINFO[0m[0014] You can now use it like this:
kubectl cluster-info

Note: Recall that the 443:443@loadbalancer is informing traffic that we're going to use a passthrough for the https port tied to our Rancher k3d distribution.

This folder should have been created in our k3d getting started lab, but just to be sure

C:\k3d> **mkdir .kube**

C:\k3d> **cd .kube**

C:\k3d\.kube> **cd ..**

On Windows:

C:\k3d> **set KUBECONFIG_FILE=C:\k3d\.kube\k3d-rancher**

C:\k3d> **k3d kubeconfig get k3d-rancher > %KUBECONFIG_FILE%**

C:\k3d> **set KUBECONFIG=%KUBECONFIG_FILE%**

On MacOS or Linux

~/k3d/.kube $ **export KUBECONFIG_FILE=~/.kube/k3d-rancher**

~/k3d/.kube $ **k3d kubeconfig get k3d-rancher > $KUBECONFIG_FILE**

~/k3d/.kube $ **export KUBECONFIG=$KUBECONFIG_FILE**

C:\k3d> **set | grep KUBE**

KUBECONFIG_FILE=.\.kube\k3d-rancher

C:\k3d> **kubectl cluster-info**

Kubernetes master is running at https://0.0.0.0:6550
CoreDNS is running at https://0.0.0.0:6550/api/v1/namespaces/kube-system/services/kube-dns:dns/proxy
Metrics-server is running at https://0.0.0.0:6550/api/v1/namespaces/kube-system/services/https:metrics-server:/proxy

To further debug and diagnose cluster problems, use 'kubectl cluster-info dump'.

C:\k3d> **k3d cluster list**

NAME SERVERS AGENTS LOADBALANCER
k3d-rancher 1/1 3/3 true

C:\k3d> **type %KUBECONFIG_FILE%**

Helm Installation

Install Helm if not already present

For Windows:

Download from the Helm releases at

https://github.com/helm/helm/releases

https://get.helm.sh/helm-v3.3.1-windows-amd64.zip

Unzip to the C:\helm folder or wherever you want the binary to live

For MacOS:

$ brew install helm

This was formerly referenced as “kubernetes-helm” before Helm3 moved past beta in 2020.

For Windows:

Open powershell

PS> **choco install helm**

Open a Windows Command Prompt (CMD)

C:\ > **mkdir helm**

C:\> **cd \helm**

C:\helm> **dir windows-amd64\.**

```
 Volume in drive C is OS
 Volume Serial Number is 5081-CA53

 Directory of C:\helm\windows-amd64

09/09/2020  12:37 PM    <DIR>          .
09/09/2020  12:37 PM    <DIR>          ..
09/09/2020  12:37 PM        39,836,672 helm.exe
09/09/2020  12:37 PM            11,373 LICENSE
09/09/2020  12:37 PM             3,308 README.md
               3 File(s)     39,851,353 bytes
               2 Dir(s)  173,093,220,352 bytes free
```

C:\helm> **move windows-amd64\helm.exe .**

```
        1 file(s) moved.
```

C:\helm> **helm version**

version.BuildInfo{Version:"v3.3.1",
GitCommit:"249e5215cde0c3fa72e27eb7a30e8d55c9696144", GitTreeState:"clean",
GoVersion:"go1.14.7"}

C:\helm> **helm repo add rancher-latest https://releases.rancher.com/server-charts/latest**

"rancher-latest" has been added to your repositories

C:\helm> **helm repo add jetstack https://charts.jetstack.io**

"jetstack" has been added to your repositories

C:\helm> **helm repo update**

Hang tight while we grab the latest from your chart repositories...
...Successfully got an update from the "rancher-latest" chart repository
...Successfully got an update from the "jetstack" chart repository
Update Complete. ⎈Happy Helming!⎈

C:\k3d> **c:\helm\helm install cert-manager jetstack/cert-manager --namespace cert-manager --version v0.15.0 --wait**

Or from the c:\helm folder

Install Cert-Manager with a Helm 3 chart

C:\helm> **helm install cert-manager jetstack/cert-manager --namespace cert-manager --version v0.15.0 --wait**

NAME: cert-manager
LAST DEPLOYED: Wed Sep 9 12:44:33 2020
NAMESPACE: cert-manager
STATUS: deployed
REVISION: 1
TEST SUITE: None
NOTES:
cert-manager has been deployed successfully!

In order to begin issuing certificates, you will need to set up a ClusterIssuer

or Issuer resource (for example, by creating a 'letsencrypt-staging' issuer).

More information on the different types of issuers and how to configure them

can be found in our documentation:

https://cert-manager.io/docs/configuration/

For information on how to configure cert-manager to automatically provision

Certificates for Ingress resources, take a look at the `ingress-shim`

documentation:

https://cert-manager.io/docs/usage/ingress/

Rollout the cert-manager deployment

C:\k3d> **kubectl -n cert-manager rollout status deploy/cert-manager**

deployment "cert-manager" successfully rolled out

Prime the container images we need to reduce the likelihood of timeout

C:\k3d> **docker pull rancher/rancher:v2.4.8**
v2.4.8: Pulling from rancher/rancher
Digest: sha256:5a16a6a0611e49d55ff9d9fbf278b5ca2602575de8f52286b18158ee1a8a5963

Status: Image is up to date for rancher/k3d-proxy:v3.0.1
docker.io/rancher/k3d-proxy:v3.0.1

Install Rancher with a Helm 3 chart
C:\k3d> **c:\helm\helm install rancher rancher-latest/rancher --namespace cattle-system --set hostname=rancher.k3d.localhost --wait --timeout 900s**
NAME: rancher

LAST DEPLOYED: Fri Sep 11 08:34:47 2020
NAMESPACE: cattle-system
STATUS: deployed
REVISION: 1
TEST SUITE: None
NOTES:
Rancher Server has been installed.

NOTE: Rancher may take several minutes to fully initialize. Please standby while Certificates are being issued and Ingress comes up.

Check out our docs at https://rancher.com/docs/rancher/v2.x/en/

Browse to https://rancher.k3d.localhost

Happy Containering!

Rollout the rancher deployment

C:\k3d> **kubectl -n cattle-system rollout status deploy/rancher**

deployment "rancher" successfully rolled out

Load the URL https://rancher.k3d.localhost

This requires that entry to be added to localhost 127.0.0.1 in our /etc/hosts file

On Windows

C:\helm> **notepad c:\windows\system32\drivers\etc\hosts**

127.0.0.1 kubernetes.docker.internal rancher.k3d.localhost k3d.my.org sample.k3d.localhost

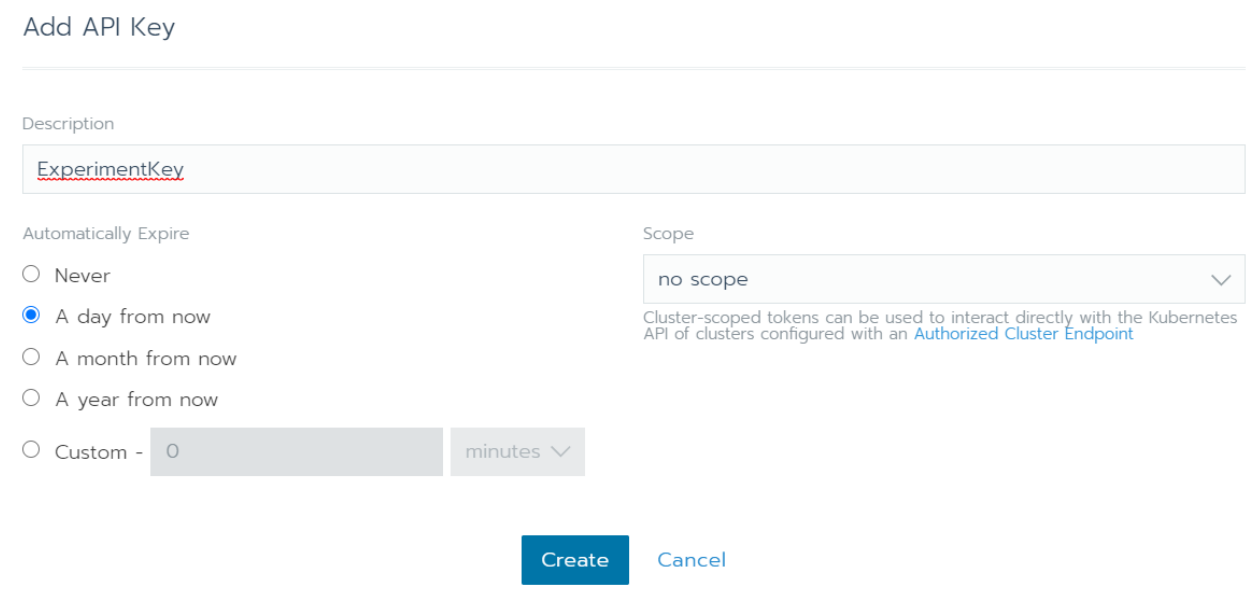
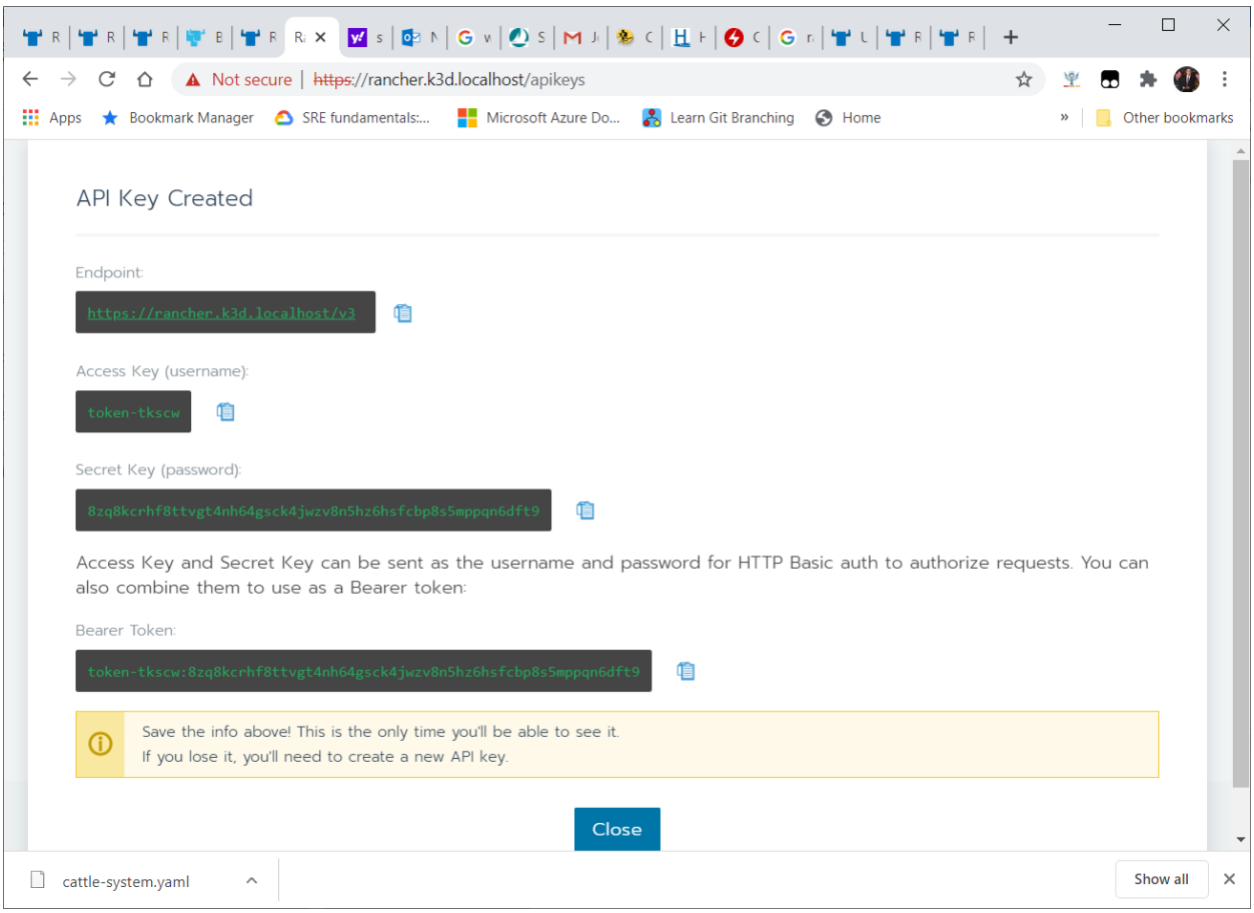
Clusters and Projects which you have



Information for API Key is displayed for Endpoint, Access Key, Secret Key and Bearer Token



API Key Created

Endpoint:https://rancher.k3d.localhost/v3

Access Key (username):token-tkscw

Secret Key (password):8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9

Access Key and Secret Key can be sent as the username and password for HTTP Basic auth to authorize requests. You can also combine them to use as a Bearer token:

Bearer Token:token-tkscw:8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9

Save the info above! This is the only time you'll be able to see it.
If you lose it, you'll need to create a new API key.

Working with the Rancher CLI

Download the Rancher CLI and drop that in the c:\k3d\rancher-v2.4.6 folder, we download from the Rancher UI, but you can also find more here:

https://rancher.com/docs/rancher/v2.x/en/cli/

Execute the CLI to login to Rancher

C:\k3d> **C:\k3d\rancher-v2.4.6\rancher login --help**

Login to a Rancher server

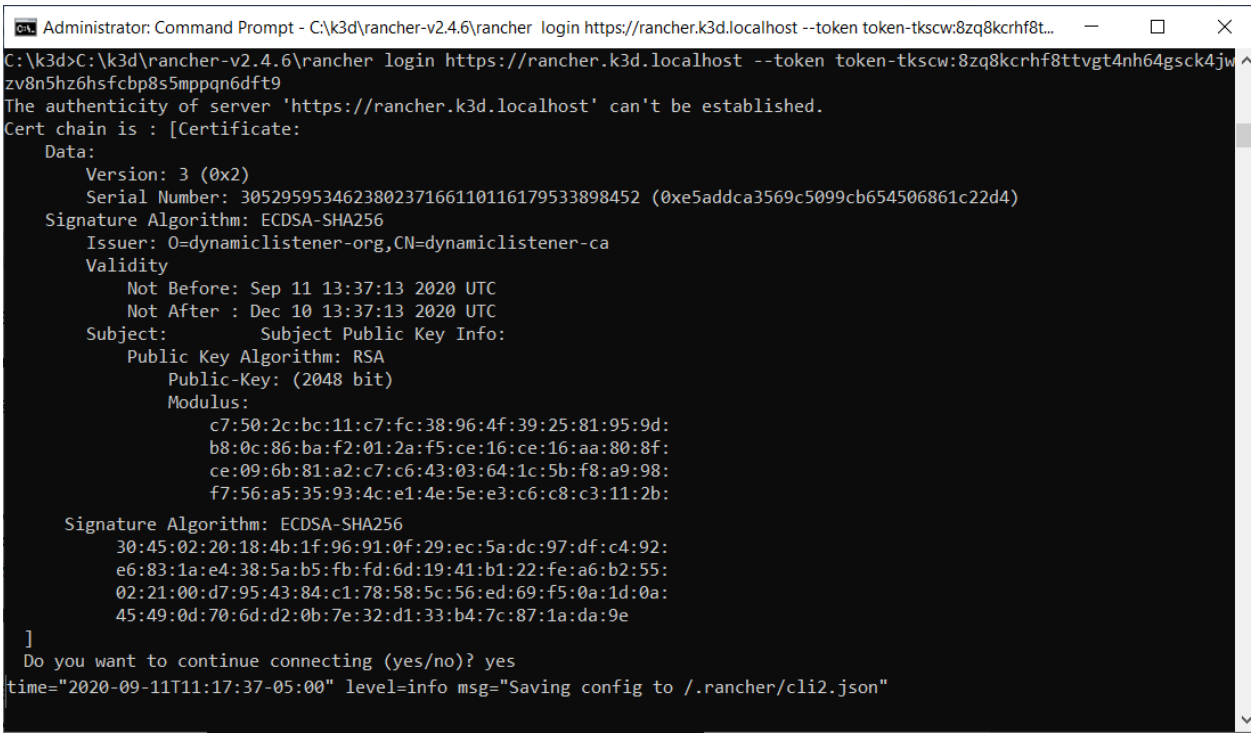
Usage:

rancher login [OPTIONS] [SERVERURL]

Options:

```
   --context value          Set the context during login
   --token value, -t value  Token from the Rancher UI
   --cacert value           Location of the CACerts to use
   --name value             Name of the Server
   --skip-verify            Skip verification of the CACerts presented by the Server
```

C:\k3d> **C:\k3d\rancher-v2.4.6\rancher login https://rancher.k3d.localhost --token token-tkscw:8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9**

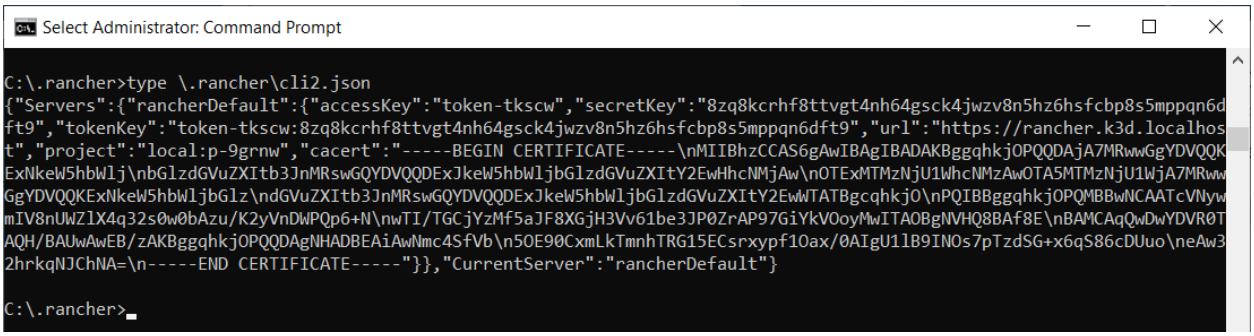


For Windows :

C:\k3d> **type \.rancher\cli2.json**

For Mac :

$> cat .rancher/cli2.json



Delete our Rancher cluster

C:\k3d> **k3d cluster delete k3d-rancher**
