

Experiment 05: Working with k3d and Rancher

```
C:\k3d> k3d cluster create k3d-rancher --api-port 6550 --servers 1 --agents 3 --port 443:443@loadbalancer --wait
```

```
[36mINFO[0m[0000] Created network 'k3d-k3d-rancher'
[36mINFO[0m[0000] Created volume 'k3d-k3d-rancher-images'
[36mINFO[0m[0001] Creating node 'k3d-k3d-rancher-server-0'
[36mINFO[0m[0001] Creating node 'k3d-k3d-rancher-agent-0'
[36mINFO[0m[0001] Creating node 'k3d-k3d-rancher-agent-1'
[36mINFO[0m[0005] Creating node 'k3d-k3d-rancher-agent-2'
[36mINFO[0m[0005] Creating LoadBalancer 'k3d-k3d-rancher-serverlb'
[36mINFO[0m[0013] Cluster 'k3d-rancher' created successfully!
[36mINFO[0m[0014] You can now use it like this:
kubectl cluster-info
```

This folder should have been created in our k3d getting started lab, but just to be sure

```
C:\k3d> mkdir .kube
```

```
C:\k3d> cd .kube
```

```
C:\k3d\.kube> cd ..
```

```
C:\k3d> set KUBECONFIG_FILE=.\.kube\k3d-rancher
```

```
C:\k3d> set | grep KUBE
```

```
KUBECONFIG_FILE=.\.kube\k3d-rancher
```

```
C:\k3d> kubectl cluster-info
```

```
Kubernetes master is running at https://0.0.0.0:6550
CoreDNS is running at https://0.0.0.0:6550/api/v1/namespaces/kube-system/services/kube-dns:proxy
Metrics-server is running at https://0.0.0.0:6550/api/v1/namespaces/kube-system/services/https:metrics-server:/proxy
```

To further debug and diagnose cluster problems, use 'kubectl cluster-info dump'.

```
C:\k3d> k3d cluster list
```

Helm Installation

Install Helm if not already present

<https://github.com/helm/helm/releases>

For Windows that would be

<https://get.helm.sh/helm-v3.3.1-windows-amd64.zip>

Unzip to the C:\helm folder or wherever you want the binary to live

Open a Windows Command Prompt (CMD or Powershell)

C:\> **cd \helm**

C:\helm> **dir windows-amd64\.**

Volume in drive C is OS

Volume Serial Number is 5081-CA53

Directory of C:\helm\windows-amd64

```
09/09/2020 12:37 PM <DIR>      .
09/09/2020 12:37 PM <DIR>      ..
09/09/2020 12:37 PM      39,836,672 helm.exe
09/09/2020 12:37 PM      11,373 LICENSE
09/09/2020 12:37 PM      3,308 README.md
          3 File(s)  39,851,353 bytes
          2 Dir(s) 173,093,220,352 bytes free
```

C:\helm> **move windows-amd64\helm.exe .**

1 file(s) moved.

C:\helm> **helm version**

```
version.BuildInfo{Version:"v3.3.1",
GitCommit:"249e5215cde0c3fa72e27eb7a30e8d55c9696144", GitTreeState:"clean",
GoVersion:"go1.14.7"}
```

C:\helm> **helm repo add rancher-latest https://releases.rancher.com/server-charts/latest**

"rancher-latest" has been added to your repositories

C:\helm> **helm repo add jetstack https://charts.jetstack.io**

"jetstack" has been added to your repositories

C:\helm> **helm repo update**

```
Hang tight while we grab the latest from your chart repositories...
...Successfully got an update from the "rancher-latest" chart repository
...Successfully got an update from the "jetstack" chart repository
Update Complete. *Happy Helming!*
```

C:\k3d> **c:\helm\helm install cert-manager jetstack/cert-manager --namespace cert-manager --version v0.15.0 --wait**

Or from the c:\helm folder

Install Cert-Manager with a Helm 3 chart

C:\helm> **helm install cert-manager jetstack/cert-manager --namespace cert-manager --version v0.15.0 --wait**

NAME: cert-manager

LAST DEPLOYED: Wed Sep 9 12:44:33 2020

NAMESPACE: cert-manager
STATUS: deployed
REVISION: 1
TEST SUITE: None
NOTES:
cert-manager has been deployed successfully!

In order to begin issuing certificates, you will need to set up a ClusterIssuer or Issuer resource (for example, by creating a 'letsencrypt-staging' issuer).

More information on the different types of issuers and how to configure them can be found in our documentation:

<https://cert-manager.io/docs/configuration/>

For information on how to configure cert-manager to automatically provision Certificates for Ingress resources, take a look at the `ingress-shim` documentation:

<https://cert-manager.io/docs/usage/ingress/>

Rollout the cert-manager deployment

```
C:\k3d> kubectl -n cert-manager rollout status deploy/cert-manager  
deployment "cert-manager" successfully rolled out
```

Prime the container images we need to reduce the likelihood of timeout

```
C:\k3d> docker pull rancher/rancher:v2.4.8  
v2.4.8: Pulling from rancher/rancher  
Digest: sha256:5a16a6a0611e49d55ff9d9fbf278b5ca2602575de8f52286b18158ee1a8a5963  
Status: Image is up to date for rancher/rancher:v2.4.8  
docker.io/rancher/rancher:v2.4.8
```

```
C:\k3d> docker pull rancher/k3s:v1.18.6-k3s1  
v1.18.6-k3s1: Pulling from rancher/k3s  
Digest: sha256:a835d76608a2503af8b681bb5888499d7c3456902f6853c8c1031f4a884715ca  
Status: Image is up to date for rancher/k3s:v1.18.6-k3s1
```

docker.io/rancher/k3s:v1.18.6-k3s1

C:\k3d> **docker pull rancher/server:latest**

latest: Pulling from rancher/server

Digest: sha256:95b55603122c28baea4e8d94663aa34ad770bbc624a9ed6ef986fb3ea5224d91

Status: Image is up to date for rancher/server:latest

docker.io/rancher/server:latest

C:\k3d> **docker pull rancher/k3d-proxy:v3.0.1**

v3.0.1: Pulling from rancher/k3d-proxy

Digest: sha256:2ff467bb4a25f904954f7f65e4c7c73134b53bd422f4229f106c7c202ee347e2

Status: Image is up to date for rancher/k3d-proxy:v3.0.1

docker.io/rancher/k3d-proxy:v3.0.1

Install Rancher with a Helm 3 chart

C:\k3d> **c:\helm\helm install rancher rancher-latest/rancher --namespace cattle-system --set hostname=rancher.k3d.localhost --wait --timeout 900s**

NAME: rancher

LAST DEPLOYED: Fri Sep 11 08:34:47 2020

NAMESPACE: cattle-system

STATUS: deployed

REVISION: 1

TEST SUITE: None

NOTES:

Rancher Server has been installed.

NOTE: Rancher may take several minutes to fully initialize. Please standby while Certificates are being issued and Ingress comes up.

Check out our docs at <https://rancher.com/docs/rancher/v2.x/en/>

Browse to <https://rancher.k3d.localhost>

Happy Containering!

Rollout the rancher deployment

C:\k3d> **kubectl -n cattle-system rollout status deploy/rancher**

deployment "rancher" successfully rolled out

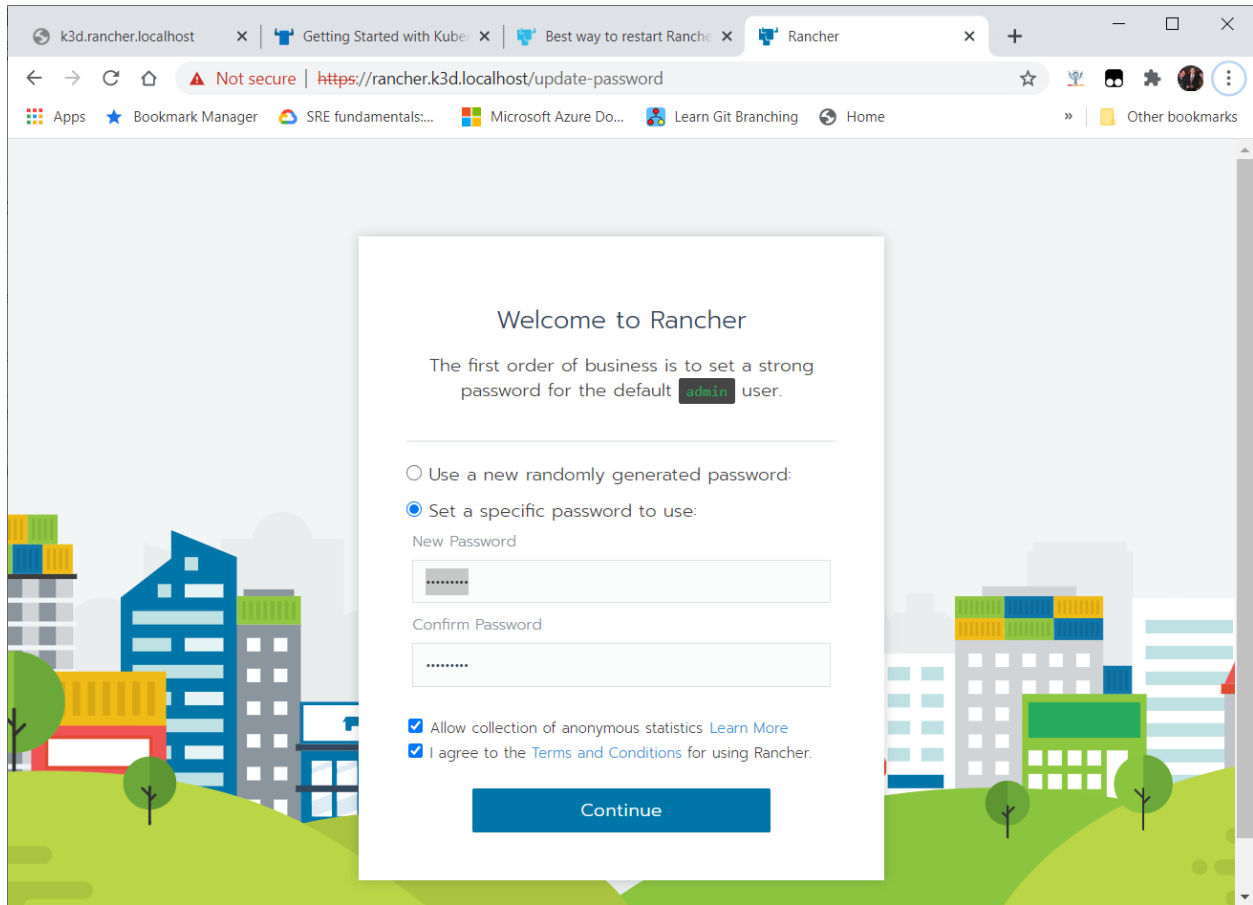

Load the URL <https://rancher.k3d.localhost>

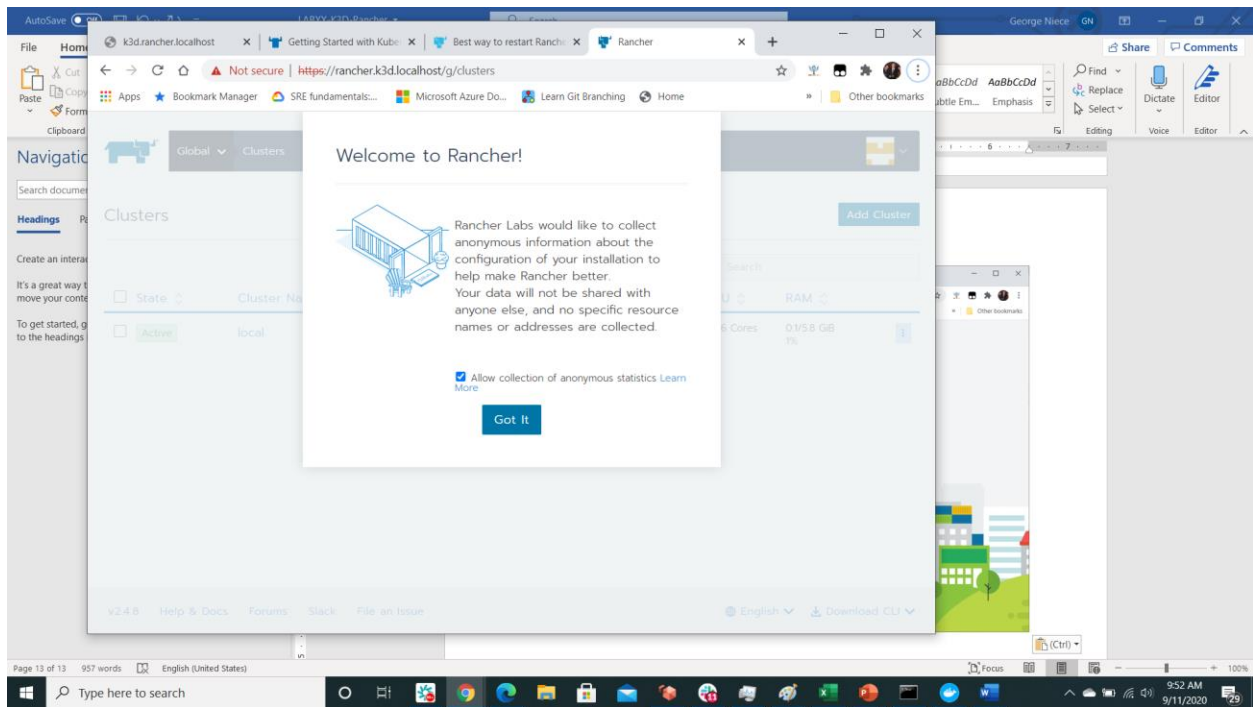

This requires that entry to be added to localhost 127.0.0.1 in our /etc/hosts file

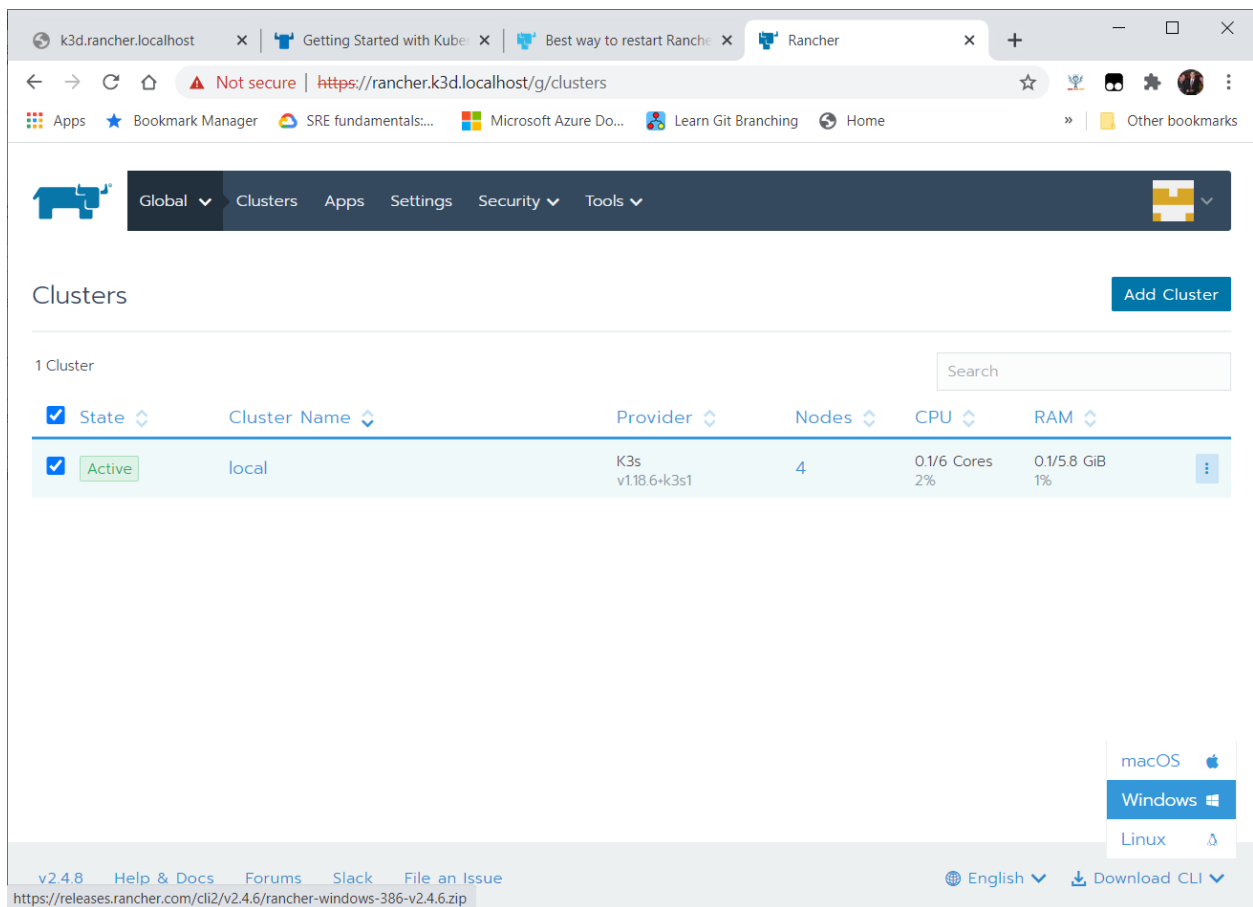

On Windows

C:\helm> **notepad c:\windows\system32\drivers\etc\hosts**

127.0.0.1 kubernetes.docker.internal rancher.k3d.localhost k3d.my.org sample.k3d.localhost

Clusters and Projects which you have

Add API Key

Description

ExperimentKey

Automatically Expire

- ☐ Never
- ☒ A day from now
- ☐ A month from now
- ☐ A year from now
- ☐ Custom - minutes

Scope

no scope

Cluster-scoped tokens can be used to interact directly with the Kubernetes API of clusters configured with an [Authorized Cluster Endpoint](#)

Create

Cancel

Information for API Key is displayed for Endpoint, Access Key, Secret Key and Bearer Token

API Key Created

Endpoint:
`https://rancher.k3d.localhost/v3`

Access Key (username):
`token-tkscw`

Secret Key (password):
`8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9`

Access Key and Secret Key can be sent as the username and password for HTTP Basic auth to authorize requests. You can also combine them to use as a Bearer token:

Bearer Token:
`token-tkscw:8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9`

Save the info above! This is the only time you'll be able to see it.
If you lose it, you'll need to create a new API key.

Close

API Key Created

Endpoint: <https://rancher.k3d.localhost/v3>

Access Key (username): `token-tkscw`

Secret Key (password): `8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9`

Access Key and Secret Key can be sent as the username and password for HTTP Basic auth to authorize requests. You can also combine them to use as a Bearer token:

Bearer Token: `token-tkscw:8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9`

Save the info above! This is the only time you'll be able to see it.
If you lose it, you'll need to create a new API key.

Working with the Rancher CLI

Download the Rancher CLI and drop that in the `c:\k3d\rancher-v2.4.6` folder, we download from the Rancher UI, but you can also find more here:

<https://rancher.com/docs/rancher/v2.x/en/cli/>

Execute the CLI to login to Rancher

```
C:\k3d> C:\k3d\rancher-v2.4.6\rancher login --help
```

Login to a Rancher server

Usage:

```
rancher login [OPTIONS] [SERVERURL]
```

Options:

<code>--context value</code>	Set the context during login
<code>--token value, -t value</code>	Token from the Rancher UI
<code>--cacert value</code>	Location of the CACerts to use
<code>--name value</code>	Name of the Server
<code>--skip-verify</code>	Skip verification of the CACerts presented by the Server

```
C:\k3d> C:\k3d\rancher-v2.4.6\rancher login https://rancher.k3d.localhost --token token-tkscw:8zq8kcrhf8ttvgt4nh64gsck4jwzv8n5hz6hsfcbp8s5mppqn6dft9
```

```
[36mINFO[0m[0007] Deleting image volume 'k3d-k3d-rancher-images'  
[36mINFO[0m[0007] Removing cluster details from default kubeconfig...  
[36mINFO[0m[0007] Removing standalone kubeconfig file (if there is one)...  
[36mINFO[0m[0007] Successfully deleted cluster k3d-rancher!
```
